- 2 years: Motor and Electronics
- 1 year: Battery

PRODUCT DESCRIPTION

The Birdie EVO XPLUS Lifter is a safe and comfortable lifting solution designed to make everyday transfers easier for both caregivers and patients. With a smooth lifting range and a strong weight capacity of up to 210kg, it's ideal for moving individuals to and from beds, chairs, or even the floor—whether in a home, hospital, or aged care setting. Its curved boom and spreader bar design help maintain eye contact during lifts, supporting a more dignified and reassuring experience.

Easy to fold and transport without tools, the Birdie EVO XPLUS includes features like an ergonomic push bar, smooth-rolling legs that fit around furniture, a dampening system to reduce patient rocking, and a detachable battery pack with up to 40 lift cycles. It's also compatible with a wide range of slings and accessories, including optional upgrades like a weigh scale, pivot frame, or 4-point spreader bar.
