- [Cura1 4017 Economy Falls Monitor](#) – 12 months

PRODUCT DESCRIPTION

CURA1 ECONOMY OUT OF BED SENSOR KIT

The Cura1 Economy Out of Bed Sensor Kit offers a simple, cost-effective way to monitor bed exits in aged care, hospital, or home environments. It's designed to help carers act quickly when someone leaves their bed, reducing the chance of falls or injuries—especially overnight or when supervision is limited.

Unlike wireless systems, this wired kit requires no pairing. As a result, it's easy to set up and maintain.

What's Included:

- [Cura1 2665 Soft Bed Pad \(760 x 500 mm\)](#)
This soft pressure pad lies beneath the user and detects changes in weight or body movement. As soon as the person gets up or shifts off the pad, it sends a signal to the monitor. The non-allergenic vinyl surface is durable, reusable, and easy to clean—making it ideal for daily use.
- [Cura1 4017 Economy Falls Monitor](#)
The compact monitor sounds a loud alarm the moment the bed pad is triggered. It includes adjustable tone, volume, and a delay option to reduce false alarms. Additionally, it features a nurse call socket and can run on batteries or an optional power adapter.

Key Benefits:

- Instantly alerts carers when someone exits the bed
- Helps reduce falls and improve night-time safety

- Simple setup—no wireless pairing required
- Budget-friendly solution for home or care facilities
- Easy-to-clean, durable components
- No ongoing fees or software needed

In summary, the Cura1 Economy Out of Bed Sensor Kit supports safer, more responsive care—without adding complexity. Whether used at home or in a facility, it offers a reliable way to protect vulnerable individuals and give carers peace of mind.
