Improved suspension

Elastomer suspension is widely used in many industries like Cycling, Truck & Trailer design, Industrial manufacture, Caravan & General Goods Trailer Manufacture to name a few. It has been proven to provide excellent durability in many applications. The overall design is a specific type of mechanical fixing that uses a rubber (or like material) to flex and absorb the forces applied to this area, the elastomer is a material that undergoes large deformation under force and quickly recovers its approximate initial shape and size after withdrawing the external force. This type of suspension provides a very comfortable drive for the user.

With less moving parts it is very reliable and generally will aid in the need for less ongoing and costly maintenance

The Ikon Presto Mobility Scooter is also designed to be easy to use and customize to your specific needs. It has a comfortable, adjustable seat and a tiller that can be adjusted to your preferred height and angle. It also features adjustable armrests and a convenient basket for storing personal items. The scooter is equipped with large wheels that provide added stability and maneuverability, making it easy to navigate tight spaces and turn corners with ease.

Another key feature of the Ikon Presto Mobility Scooter is its advanced safety features. It is equipped with a rear-view mirror, front and rear lights, and a horn, ensuring that you can travel safely and securely. The scooter also features an electromagnetic braking system that provides added security and stability when you need to stop quickly.

Overall, the Ikon Presto Mobility Scooter is an excellent choice for anyone who requires a reliable and stylish mobility scooter.
