PRODUCT DESCRIPTION

VULKAN HERNIA BELT – DOUBLE SIDED SUPPORT FOR INGUINAL HERNIAS

The Vulkan Hernia Belt – Double Sided offers comfortable, targeted support for those managing reducible inguinal (groin) hernias. Designed for discreet, everyday wear, this lightweight belt applies gentle and adjustable pressure to help reduce hernias and provide pain relief during movement.

This hernia belt features two removable, flexible compression pads, allowing for either left, right, or double-sided use—depending on the location and severity of the hernia. The soft and supportive pressure pads ensure comfort without restricting movement, making it suitable for daily wear under clothing.

Key Features:

- Double-sided support for bilateral inguinal hernias
- Two removable compression cushions for targeted pressure
- Soft, comfortable pad pressure to support reduction
- Fully adjustable straps for a secure and personalised fit
- Low-profile design for discreet wear under clothing

How to Wear:

1. Wrap the belt around your waist with the compression pads positioned at the front.
2. Pull the under-straps between the legs.
3. Thread the straps through the buckles and adjust for a snug, comfortable fit.

Recommended For:

- Uncomplicated, reducible inguinal hernias (left, right, or both sides)
- Individuals looking for non-surgical support during daily activities

Care Instructions:

- Hand or machine wash in cold water using mild soap
- Do not bleach, tumble dry, dry clean, or iron
- Air dry away from direct heat or sunlight

Whether you’re recovering from a hernia or looking for preventive support during physical activity, the Vulkan Hernia Belt – Double Sided provides a non-invasive, effective solution for managing groin hernias in comfort.
